1. Suppose a large mining pool performed a 51% attack on a blockchain. What would this enable them to do?

1 / 1 point

- ☐ Impersonate other users
- ☐ Steal cryptocurrency from other users
- ☒ Reverse one of their previous transactions and "double spend" that same amount
- ☐ Create new cryptocurrency out of thin air

✓ **Correct**

For this reason, a 51% attack is also known as a "double spend attack."
